

UML class diagram (logical data model; classes + fields from plan_schema.py)

name / attributes — composition (Plan owns the part); the number at the part end is the **multiplicity** —

how many of that part a Plan may hold: 1..* one or more · 0..* any number (optional, repeatable) · 0..1 at most one

→ association: *connections*, *depends_on* (reflexive), *consumers* -.-> *traces_to*: design_variables · constraints · objective → requirements

header tint groups sections: model optimization intent process (no formal meaning)
